

CHEMISTRY

Question for Weekly Test -6

Class – 11

1. Explain why gases do not settle on the bottom of a container?
2. Find the value of **R** in:
 - (a) CGS unit
 - (b) SI unit
3. The relative densities of carbon dioxide and ozone are **22 and 24** respectively. If **12 mL of carbon dioxide** diffuse in **100 seconds**, what volume of ozone will diffuse in the same time under similar conditions?
4. Why is the size of **Cl⁻ ion** larger than **Cl atom**, whereas the size of **K⁺ ion** is smaller than that of **K atom**?
5. What is periodicity? How do atomic radii vary in a group and period?
6. Starting from sulphur, how would you obtain sulphuric acid? Explain with necessary diagram.
7. With a suitable example, explain the terms:
 - (a) Oxidizing agent
 - (b) Reducing agent
 - (c) Oxidation
 - (d) Reduction

Balance the following reactions either by **D.I.N. method** or **ion-electron method**:

8. Write a short note on “**Faraday’s Laws of Electrolysis.**”
9. How long a current of **3 ampere** has to be passed through a solution of **AgNO₃** to coat a metal of **80 cm²** with a **0.005 mm thick layer**?
(Density of Ag = 10.5 g/cm³)
